TERMS OF BUBSCRIPTION. One vest. Six months..... Three months....

The Advent of the Oyster.

Precisely to whom it is that we are indebted for the probibition traced back to Batler's 'Diet's Dry Dinner," published in 1599,-"in is ucreasonable and unwholesome in all months that have not an R in their name to eat an cyster,"-cannot by said. Nor do wy suppose that it makes much differeres who is was that first ferm placed that die um which all ichthy. ologists do not receive nowadays with unquestioning faith. Though they may preach that even in midsammer the oyster is edible, they will nover be able to overcome the prejudice imparted to successive generations of conservative and credulous oyster eaters, any more than the mass of the American people will ever be induced to accept the ruling of the United States Tressary D. pertmont to the effect that the oyster is not a fish. Acynay, as Mr. Leigh

'Summer is ended, and autumn is here, Though for the present we're not very far in it; Oysters are back again, -awful y dear,-Still they are back, for the month has an R

The lines of the bard of Cockayne will seem not a little strange to readers who remember how Mr. Weller once detected a natural connection between poverty and cysters; and how, not long before the Pickwickian era, Christopher North and his fellow bacqueters of the "Nocies Ambrosista" devoured them by finies and by hundreds. The only "natural coancotion between poverty and cysters" in Eeg and nowadays, is to be found in the fact that any one indulging at all freely in oysters will soon find timself on the high road to in-

digence.
In 1806, oysters were to be had in London for sixpence a dczen, or a cent spiece; they Ware even chesper in Dubin. Now, in Ireland the price ranges from forty-five to fifty cente; while in England it is from flity to sevones by any means. It is just a quarter of a century since the fisheries in England, Ireland and France first indicated expansion, and re-Eaglish have only known two good seasons, these of 1858 and 1859, and the fail of the spat in recent years has snown that no amendment need be expected of the uppromising situation until at the very earliest, 1885. Immense as should be the supply of oysters under favorable circums acces-one oyster produces from 275. 000 to \$30,000 young-it is absolutely necessary that the water should be warm when the spat talle, or it will sink to the bottom and die; and, by some meisccholy coincidence, year after year, even in the phenomenally hot seasons of 1868. 70, a "oold so p" has occurred at the critical thought of their prudent and systematic French | FRENCH S 93 & 95 KINGST: neighbors, who, as soon as they found their oys:er-fisheries threatened—the famous grounds in the Bay of Cancale yielded 1,500,000 oysters in 1868 and forty times that number in 1848set to work to cultivate the precious shellfish artificially. There are now in France some 25 000 acres of oyster farms, with more than 40,000 cultivators, and, of the 600,000,000 or or 700,000,000. oysters marketed annually, only a quarter come from the fisheries, which, it may be added, are steadily gaining, thanks to the policy of protection and

recuperation. The French oysters most in fashion, it may be said, are those of Marennes and of Ostend, which are small, but very tender and savory, and are of a grayish green ollor, produced by keeping them for some eight weeks in pits filled with salt water but very slightly changed. It need hardly be said that unterupulous French dealers and farmers counterfeit these systems by using a solution of salts of copper, in some cases sufficiently strong to produce nouses and slight poisoning. It is worth recording, as one of the anomalies of lashion, that the English reject green toorded ovsters at home as unhealtny, and pay fancy prices for them at Ostend.

The oyster is not esteemed in England till it has reached its fifth or sixth year. An analysis of the meat shows that it is composed of (1) water, containing hydrochlorate of soda, hydro chlorate of megnesis, and sulphates of soda lime and magnesis; (2) much phosphate of iron and lime; (3) much amizone and glycogen; (4) a certain quantity of gelatice and muone; (5 an animal material, of which phosphorus is the principal element. Mr. Buckland deemed in necessary to urge his countrymen always to have their oysters served on the round shell, with the patural I quor left in the hollow. It is a little curious that he did not at the same time condemn the practice of swallowing oysters whole.

Dr. William Roberts, in his lecture on the digertive ferments, gives this passage: "The oyster is almost the only animal substance which we eat babi ually, and by preference, in the raw or necooked state; and it is interesting to know that there is a sound physiological reason at the bottom of this preference. The lawn colored mass which constitutes the dainty of the cyster is its liver, and this is little les han a heap of glycogen. Associated with the g roogen, but withheld from so usl contact with ne during life, is its appropriate digestive fer-ment-the hepatic dissesse. The mere crushing of the dainty between the teeth brings these two bodies together, and the g yoogen is at once disgested without other help by its own diastase. The cyster in the uscooked state, or merely warmed, is, in fact, self digestive. Bu the advantage of this provision is wholly lost ty ootking, for the heat employed immediately destr ys the as: o listed ferment; and a cooked oyster has to be digested, like any other food, ty the eater's own digestive powers." Immense as is the consumption of oysters in

the United States, so great is the supply-and it is especially gracifying to observe that the question of its conservation is receiving attenand in due time, -that we shall long have a surplus for exportation to Europe, where a market is always open for them. If we are not in error, the experiment of transplanting them to Europeau bede his been tried on a large scale on the coast of a calesnig, where this fall's experience should decide as to the probable measure of its success. However, with fast ocean steamers and refrigerating apparaius, it is possible to ship oys ers to England, France or Germacy, and to deliver them there at a price far below the natives. It is to be re-Winfree & Lloyd's Pride of Virginia!
Hiswatha and other brands at factory prices!
Always keeps a large stock in store. Call and see him, at No. 71 King street, before you buy dec 16

greated that our oyster export trade has suffered somewhat from that lack of care which should never be shown in business, if possible, but least of all in a new tuniness which it is desired to build up.—Philadelphia American.
